## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pitchumani et al (Catalysis Letters, 1993).

The instant claims are drawn to a process for preparing 3-nitro-4-alkoxybenzoic acid by reacting a 4-alkoxybenzoic acid and 40-80% nitric acid at a reaction temperature from 30 to 100° C.

Pitchumani et al teach the nitration of p-anisic acid (4-methoxybenzoic acid) with fuming nitric acid (i.e., about 70% nitric acid) to produce 3-nitro-4-methoxybenzoic acid. The differences between Pitchumani et al and the instant claims are that Pitchumani do not teach the exact temperature range recited in the instant claims; Pitchumani et al teach a suggest a temperature corresponding to that at which nitric acid is refluxed in a water bath, and the reference does not expressly teach cooling and precipitating the reaction product.

None of these differences confer patentability to the instant claims. The temperature during which the nitration takes place would have been obvious to a person having ordinary skill since it is within the range that such a person would expect a nitration reaction to commence, base on prior art teachings. As far as the isolation

steps recited in the instant claims, the examiner finds the cooling and precipitation steps obvious since such steps are well within the knowledge of a person having *ordinary* skill in the art looking to separate the product from the reaction mixture.
